

The Annual Conference of the Indian Geotechnical Society brings together the Geotechnical Community

The Annual Conference of the Indian Geotechnical Society, held from 15th – 17th December gave Strata India an opportunity to reconnect with the geotechnical community. The theme of the conference was “Soft Clay Engineering”. Strata participated as exhibitors at this conference cum exhibition.

The traffic throughout the conference was heavy, with people from both the industry and academia. A lot of curiosity was generated regarding the StrataWeb and Geopier® technology. The aim of the conference was fulfilled which was to bring together professional engineers, academicians, researchers, industrialists and others, with interest in Geotechnical Engineering, for exchanging their experiences.

One of the most important highlights for us was our DGM – Technical, receiving an award for the best paper on “Innovations in Piling and other Foundation Construction Techniques” which was published in the Indian Geotechnical Society Journal.

This IGC Kochi chapter is the youngest of the Geotechnical Society which enables professionals in Kerala to keep abreast technologies by arranging technical lectures, seminars, workshops and site visits. To know more regarding this event visit: www.igc2011kochi.org
